

Confluence & Jira migrated to PostgreSQL and upgraded

After two afternoons of work we have managed to upgrade both [Confluence](#) and [Jira](#) to current versions.

Along the way we **had to move from MariaDB to PostgreSQL**, because Atlassian is unwilling to search+duplicate+change a few lines of code to support MariaDB besides MySQL, see [JRASERVER-32347](#) & [CONFSERVER-29060](#).
