

# FancyMail Home

Fancymail is a free alternative message sending service for e-mail and SMS in JAVA. It provides asynchronous sending, catches sending errors and is configurable for various connection types.

Integrate Fancymail into Spring and let it deliver your e-mails over Gmail.

The SVN Repository is located here:

```
svn.clazzes.org/svn/fancymail
```

## Quick-Start Guide

You can download the .jar files for manual integration from our maven repository:

```
http://maven.clazzes.org/org/clazzes/fancymail/
```

## Using Maven

We recommend to build your project with [Maven](#). Include the repository location and the dependency in your pom.xml and you're done.

```
<repository>
  <id>clazzes.org</id>
  <url>http://maven.clazzes.org/</url>
</repository>

...

<dependency>
  <groupId>org.clazzes</groupId>
  <artifactId>fancymail</artifactId>
  <version>yourversion</version>
</dependency>
```

## Source code and issue tracker

Subversion:
