

*X Packages Home

Introduction

*X Packages are our taste of (re)packaging other (non-Java resp. architecture dependent) Software for Debian (and Ubuntu LTS) to allow easy installation and updates over our debian archives at deb.clazzes.org.

Packages

Packages available are:

- [ImageMagick](#) 6.6.4-10.
- Pure-FTPd 1.0.21-12.2clazzes1, based on 1.0.21-11.1ubuntu2 from hardy but built with `--without-capabilities` so it runs in OpenVZ VEs

Source code and issue tracker

Subversion:

- <http://svn.clazzes.org/svn/xpkg> (main project packaging 3rd party stuff)
- <http://svn.clazzes.org/svn/empkg> (EMacs scripts from our EMacs Guru)
