

FTPSync Home

FTPSync.pl

FTPSync.pl is a PERL skript to synchronize a local directory tree and a remote FTP directory tree.

After year at IBCL/ITEG (see History below) it is now in the progress of beeing migrated to GNU:

- **New FTPSync homepage** is <https://savannah.gnu.org/projects/ftpsync/>
- **New source code repository** is <http://git.savannah.gnu.org/cgiit/ftpsync.git>
- A **mailing list** has been started at <https://savannah.gnu.org/mail/?group=ftpsync>

History

FTPSync.pl started as IBCL's first open source project, published under the GPL.

It was initially started using the services of [SourceForge.net](https://sourceforge.net/projects/ftpsync/) ([ftpsync.sourceforge.net](https://sourceforge.net/projects/ftpsync/), sourceforge.net/projects/ftpsync/).

Then it has then been moved to clazzes.org (www.clazzes.org/ftpsync, [download](#), [svn](#) and [documentation in svn](#)).
