

DomainPasswordLoginService

Motivation

Some time ago we created a [HttpLoginService](#) and several [GWT implementations](#) towards JAAS, LDAP/ADS, and HTTP.

When we started to move away from GWT, we decided to do a major refactoring of the login service topic.

DomainPasswordLoginService

[DomainPasswordLoginService.java](#) is our second generation login service interface.

For implementations and even backends, see [Authentication Tools Home](#).
