

# Eclipse Version Codenames

Beginning with 4.3, Eclipse distribution downloads lack any numerical version hint in their file names. **WHY?**

Anyway, this is why we started the following Eclipse version and codename overview:

Version	Codename	Remarks, Tips
3.7	Inidigo	Rock solid, keep installation as failback
3.8	?	
4.2	Juno	At first unusuable in GTK, now
4.3	Kepler	Numeric version dropped from tarball names
4.4	Luna	4.4M4 finally fixed <a href="#">bug #8009</a> by providing editor splitting via hotkeys Strg+_ resp. Strg+{
4.6	Neon	Installer available
