

Clazzes.org Home

Clazzes.org is ...

... an Open Source project featuring libraries for JAVA and other programming languages.

It is operated by [ITEG](#) with support from several other contributors from Austria (See [Contact & Contributors](#)).

Software projects

- [Authentication Tools Home](#), authentication service connectors and a backend
- [Clazzes-Utils](#) are a collection of Java utils under org.clazzes.util, and the historic root of the clazzes.org project
- [Colin](#), a structural analysis application with a lightweight interface, an part of the QT Ambassador Program
- [CSVEdit](#), yet another editor for .csv like files, in C++ with QT4
- [Data Model Generator and Utils](#), generates POJOs and DAOs from data models specified in xml
- [DOJO-Clazzes](#), things created when moving from GWT to DOJO Toolkit
- [FancyMail](#), a free alternative message sending service for e-mail and SMS in JAVA
- [FancyLibs](#), a collection of lightweight portable basic function classes for C++
- [FTPSync](#), a PERL skript to synchronize a local directory tree and a remote FTP directory tree
- Some basic GWT tools, currently covered by the know-how space [GWT Basics](#)
- [HPGS](#), a HPGL/2 interpreter in C++
- [JarTools](#) makes it easier to retrieve and manipulate meta information in .jar files resp. META-INF/MANIFEST.MF, and similar bits like pom.properties.
- [JDBC2XML](#), started as a commandline tool for dumping and restoring databases from/to XML and slowly growing to a Java library for simple table creation and manipulation
- [MLP](#) (Mail.Log-Parsing) a script collection to make it easier to parse /var/log/mail.log and the like
- [OOOEngine](#), a wrapper to have a OpenOffice or LibreOffice daemon perform tasks like convert files
- [PBA Package Builder + Archiver](#), the collection of tools that builds and distributes all our C++ software and Debian packages (see below and [deb.clazzes.org](#))
- [Remoting](#), a RPC framework for C++ and Java using TCP/IP and optionally TLS
- [Sketch](#), a 2D graphics framework for web applications
- [TopicMap Engine](#), a implementation of the TopicMaps API (TMAPI 2.0.2)

Downloads, Packages, Source Code

For installers, tarballs and debian packages go to the [Downloads page](#), [deb.clazzes.org](#), or [maven.clazzes.org](#).

For source code start at the [Repository Access](#) page or simple at [svn.clazzes.org](#).

Best Practices

As everyone we are trying to find [Best Practices for software development](#).

Know How collections

Besides [a general Know-How collection](#) (including [Gnome3 hints](#)) there are specialized information collections for ...

- [GWT](#)
- [OSGi](#)

Packaging Projects

[Adapting PBA to new Debian Release](#)

Besides packages for our own software projects, our debian repository deb.clazzes.org also provides (re)packaging of some other projects.

The re-packaging is documented in these confluence spaces:

- [JPKG \(Java Packages\)](#), debian packages for a few foreign Java projects
- [Mingw Debian Packaging](#), for packaging MinGW64 cross build chain tools our way
- [*X Packages](#), some re-packagings like backports

Arts Projects

After searching for free pictures once too often, we started to collect and draw some free stuff using svg.

They are available directly via subversion: <http://svn.clazzes.org/svn/stockpicks>

Accounts available only on request due to vandalism

We are always open to new contributors (our Open Source licenses of [Atlassian's Confluence](#) and [Jira](#) demand so anyway). Unfortunately some vandalism incidents forced us to turn public registration off.

Honest users however are still welcome, so whoever wants to register, please [contact us](#) and we will gladly provide accounts on [confluence.clazzes.org](#), [jira.clazzes.org](#), eventually even write access to [subversion](#) and [debian](#) repositories.
