

# HttpLoginService

## Motivation

The [HttpLoginService](#) is an API to provide web applications with a pluggable login service (authentication service).

## Implementations

- [First generation implementation using GWT](#), rather obsolete now
- [org.clazzes.login.adapter.http](#) based on and part of [DomainPasswordLoginService implementations and backends](#)

## NG: DomainPasswordLoginServer

During several real world projects we learnt that we often need more authentication functions than we put into HttpLoginService.

Therefore we created [DomainPasswordLoginService](#).
