

Running Eclipse 4.4 Luna under debian wheezy

Eclipse 4.4 Luna is affected by [Bug 430736](#), which makes it unable to start Eclipse Luna under debian wheezy.

In fact, the crash occurs during the detection of an appropriate GTK+ library version and triggers a segmentation fault with glibc versions 2.13.

In order to allow running Eclipse Luna under debian wheezy, add the following lines to your eclipse.ini file:

Lines to activate GTK+2-only mode in eclipse.ini

```
--launcher.GTK_version  
2
```

Using `-noSplash` or setting `SWT_GTK3=0` may help, too.
